

Double arm electric surgical pendant(NEW)

HFP-DS240 380(NEW)

The double arm electric surgical tower is characterized by being able to move far and near in a wide range, with 340 degree arbitrary rotation of multiple joints, and equipped with mechanical brake to prevent drift. It can be conveniently moved to any area of the operating table according to your needs. It is convenient, practical and easy to operate. It is an ideal mobile working system for medical body, power network output terminal and treatment instrument bearing platform in large and medium-sized operating rooms.
