

Qz-I pneumatic tourniquet

Product Description

The product is mainly used in the operation of limbs in hospital. The method of artificial air pressure is used to block the blood flow of limbs with tourniquet, so as to achieve hemostasis. The volume of the product is small.

It is light to carry, convenient to use and has good hemostatic effect. It is equipped with three kinds of tourniquets: large tourniquets, medium tourniquets and small tourniquets.

Large tourniquets are used for adult lower limbs, medium tourniquets are used for adult upper limbs or children's lower limbs. A small size used in the upper limb of a child.
